- **Engages current debates in environmental and natural resources law, policy and governance**
- **One of the most systematic, rigorous and sophisticated empirical inquiries into multiple new governance programs attempted to date**
- **Develops principles and practical tools to advance theory and make new governance capable of successful application in the future**

Hb • ~~£65.00~~ £52.00 • 9781849714105 • 240 pages • November 2011

A bold and profoundly new way of governing environmental problems is palpable around the globe and aims to overcome the limitations of the interventionist state and its market alternative to offer more effective and legitimate solutions to today's most pressing environmental problems. The 'new environmental governance' (NEG) emphasises a host of novel characteristics including participation, collaboration, deliberation, learning and adaptation and 'new' forms of accountability. While these unique features have generated significant praise from legal and governance scholars, there have been very few systematic evaluations of NEG in practice, and it is still unclear whether NEG will in fact 'work', and if so, when and how.

This book offers one of the most rigorous research investigations into cutting edge trends in environmental governance to date. Focusing its inquiry around some of the most central, controversial and/or under researched characteristics of NEG, the book offers fresh insights into the conditions under which we can best achieve successful collaboration, effective learning and adaptation, meaningful participatory and deliberative governance and effective forms of accountability. The book synthesizes its findings to identify eight design principles of 'good' NEG that are central to its success and will provide useful guidance for policymakers and scholars seeking to apply new governance to a wide range of environmental and non-environmental policy contexts. The book also advances our understanding of State governance and will be a valuable reference for scholars, researchers and students working in law and regulation studies - especially in the field of environmental law.

ABOUT THE AUTHORS

Cameron Holley, PhD, is a Lecturer in the Centre for Legal Governance at Macquarie Law School, Macquarie University.

Neil Gunningham is Professor in the School of Pacific and Asian Studies and in the Fenner School of Environment and Society at the Australian National University.

Clifford Shearing is Professor and Director of the Criminology Centre at the University of Cape Town, and a Visiting Fellow of the Regulatory Institutions Network.

**Global Corruption Report
By Transparency International**

The global response to climate change will demand unprecedented international cooperation however corruption threatens to jeopardise these efforts. Transparency International's Global Corruption Report: Climate Change is the first to explore such corruption risks. More than 50 leading experts and practitioners contribute, covering four key areas: governance, mitigating climate change, adapting to climate change and forestry governance. The report provides essential policy analysis to help policy-makers, practitioners and other stakeholders understand these risks and develop effective responses at a critical point in time when the main architecture for climate governance is being developed.

Citizen Participation in Global Environmental Governance

Edited By **Mikko Rask, Richard Worthington, Minna Lammi**
Pb • £29.99 £23.99 • 9781849712828
• 304 pages • August 2011 •

'WWWViews' was the first-ever global democratic deliberation. This book - which analyses the experiences and lessons from this ground-breaking event - marks the beginning of a new kind of democratic politics.

The authors explore important themes for participatory approaches from the local to the global: deliberation within global governance; methodology and practice; participant selection; policy impacts; engaging the media; how policy culture affects deliberation uptake; capacity building and knowledge transfer; process evaluation; content analysis; and gender, race and class aspects.

Repowering Communities
Small-scale Solutions for Large-scale Energy Problems

By **Prashant Vaze and Stephen Tindale**
Pb • £19.99 £15.99

Hb • £75.00 £60.00 9781849712668
• 192 pages • June 2011

Energy policy is at a crossroads. Attempts to meet targets for carbon emissions, energy security and affordable energy for vulnerable households are all on a trajectory to failure. In this book Vaze and Tindale use examples of small scale local solutions to examine how communities from across Europe and North America have driven reductions in energy use. Among the issues examined are the drivers behind behavioural change, the methods used to secure investment and what government can do to foster wide scale action.
